

THE KING'S BOOK OF NUMEROLOGY 3 – MASTER NUMBERS

AUTHOR'S INTRODUCTION

Since 1980 when I began my numerology studies, I have been increasingly and profoundly mesmerized by the incredibly intelligent, intricate, and perfect design of life and destiny via numbers. From my point of view, it is irrefutably impossible for anyone who studies numerology with an open, unbiased, unfiltered, and unagendized mind not to see that an Intelligence far beyond the comprehension of our limited human intellect exists in the Universe as the Creator of everything. Call this Creator God, Source, Spirit, or whatever. The name is inconsequential. What is consequential and undeniable is that this Power exists and is the foundational Reality of All that exists.

What is equally irrefutable to me is that each of our lives houses a perfect blueprint of our destinies, which are also defined by numbers as well as their associated letters. Life is so much more than what we see, hear, feel, touch, taste, and sense through our limited material abilities. We are real, but we, in comparison to the All, are small, incredibly small. This does not mean we are not important. It is just that in comparison to the Creator, we are no more than a speck of dust on a speck of dust on an electron of an atom.

Yet, if we are to grow and expand our awareness of life and its unfathomable dimensions and spiritual attainments, we must continue to study, not just numbers and their relationship to life, but to divinity and our place in the great cosmic scheme of creation.

Regarding numerology, I believe we have an enormous amount of knowledge yet to discover in relation to numbers and their association to life and destiny. In fact, can there ever be an end to the knowledge? This third edition of *The King's Book of Numerology* series focuses exclusively on Master Numbers. Is it the last word on master numbers? Absolutely not. It is just a beginning foray into their understanding. I share with you here what I have learned to date, hoping that it will add to the amalgam of numerology knowledge currently in existence.
